

Project Design Phase
Proposed Solution Template

Date	26 June 2026
Roll No	23A51A05P7
Project Name	Leave Approval System
Maximum Marks	2 Marks

Proposed Solution Template:

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Many organizations manage employee leave requests manually through paper forms, emails, or verbal communication. This results in delayed approvals, lack of transparency, difficulty in tracking leave status, and inefficient communication between employees and managers.
2	Idea / Solution Description	Develop a ServiceNow-based Leave Approval System where employees submit leave requests digitally. Managers review and approve or reject the requests through the application. ServiceNow Flow Designer automatically updates the request status and sends email notifications to employees. Employees can also track the status of their leave requests through the application.
3	Novelty / Uniqueness	The solution integrates role-based access control, automated leave approval workflows, email notifications, centralized leave record management, and separate Employee, Manager, and Administrator views within a single ServiceNow application. It eliminates manual paperwork and improves the efficiency of the leave approval process.
4	Social Impact / Customer Satisfaction	The application improves transparency, reduces paperwork, speeds up leave approvals, and enhances communication between employees and managers. Employees receive timely updates, while managers can efficiently manage leave requests through a centralized platform.
5	Business Model (Revenue Model)	The solution is designed for organizations as an internal leave management application. It can be deployed across companies using the ServiceNow platform. Future enhancements can support a Software-as-a-Service (SaaS) model for multiple organizations.
6	Scalability of the Solution	The application is built on the ServiceNow platform and can scale to support multiple departments, branches, and thousands of employees. Additional modules such as leave balance management, HR integration, reporting dashboards, mobile access, and analytics can be added without significant architectural changes.
