

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

|               |                       |
|---------------|-----------------------|
| Date          | 26 June 2026          |
| Team ID       | 23A51A05P7            |
| Project Name  | Leave Approval System |
| Maximum Marks | 4 Marks               |

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic)         | Sub Requirement (Story / Sub-Task)                                                                                                                                                                                                      |
|--------|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | User Authentication & Role Management | Authenticate users using the existing <b>ServiceNow Users (sys_user)</b> table.<br>Assign <b>Employee</b> role to employees.<br>Assign <b>Manager</b> role to approvers.<br>Assign <b>Administrator</b> role for system administration. |
| FR-2   | Leave Request Management              | Employees can create and submit leave requests.<br>Employees can enter leave type, leave dates, reason, and attach supporting documents (if required).                                                                                  |
| FR-3   | Leave Request Review and Response     | Managers can view pending leave requests.<br>Approve leave requests.<br>Reject leave requests with comments.<br>Update the leave request status.                                                                                        |
| FR-4   | Leave Status Tracking                 | Employees can view the status of submitted leave requests.<br>Status includes <b>Pending, Approved, and Rejected</b> .                                                                                                                  |
| FR-5   | Workflow Automation & Notifications   | Trigger a ServiceNow Flow Designer workflow after leave submission and approval/rejection.<br>Send approval email notification.<br>Send rejection email notification.<br>Update leave records automatically.                            |
| FR-6   | Leave Records Management              | Store all leave requests securely in the Leave Request table.<br>Allow administrators to view and manage leave records.                                                                                                                 |
| FR-7   | Dashboard & Reporting                 | Managers and administrators can view leave request summaries, pending requests, approved requests, and rejected requests through dashboards and reports.                                                                                |

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| <b>FR No.</b> | <b>Non-Functional Requirement</b> | <b>Description</b>                                                                                                                                                                      |
|---------------|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1         | <b>Usability</b>                  | The application shall provide a simple, user-friendly interface for employees, managers, and administrators.                                                                            |
| NFR-2         | <b>Security</b>                   | Access shall be controlled using ServiceNow roles. Employees can access only their own leave requests, while managers and administrators have access according to their assigned roles. |
| NFR-3         | <b>Reliability</b>                | The application shall accurately store leave requests and process approvals without data loss.                                                                                          |
| NFR-4         | <b>Performance</b>                | Leave requests, approvals, and email notifications shall be processed with minimal delay under normal usage.                                                                            |
| NFR-5         | <b>Availability</b>               | The Leave Approval System shall be available whenever the ServiceNow instance is operational.                                                                                           |
| NFR-6         | <b>Scalability</b>                | The application shall support an increasing number of employees, managers, and leave requests without major design changes.                                                             |
| NFR-7         | <b>Maintainability</b>            | The system shall allow administrators to update workflows, notifications, and forms with minimal effort.                                                                                |
